

Personal Health Risk Assessment

The purpose of this assessment is to determine your risk of developing the degenerative diseases common among Americans. Although diagnostic testing can sometimes be important, the best testing can do is to detect disease at an early stage. A complete inventory of your diet and lifestyle can help you to determine whether or not changes need to be made in order to avoid becoming ill. It is always easier to prevent disease than to recover from it.

Scoring System

under 20 points

You are doing a great job. Of course, it would be best if you scored no points, but no one is perfect! Keep working at maintaining dietary excellence and optimal habits.

21-35 points

Although you are doing a lot of the right things, your risk of developing

degenerative diseases is elevated and there is room for improvement.

36-50 points

Your diet and lifestyle are in need of improvement in order to reduce your risk of diseases like cardiovascular disease, cancer and diabetes. Best to start now!

51-65 points

Immediate changes are needed, as your risk is quite high.

66 or higher

You are in the highest risk category for developing conditions associated with poor diet and lifestyle.

Dietary Excellence and Optimal Habits

Guidelines for diet:

- Start the day with a healthy breakfast, and eat several small meals throughout the day
- Consume a plant-based diet with 90% of calories from fruits, vegetables, whole grains and legumes
- Consume animal foods sparingly, and eliminate cow's milk products
- Make water your first choice beverage and drink at least 64 ounces daily
- Reduce your consumption of processed and highly refined foods
- Increase your fiber consumption
- Decrease fat consumption

Guidelines for living:

- Go to bed early – an hour of sleep before midnight is worth two hours after
- Change situations that cause you stress or change your response to stress
- Take a personal inventory and improve those things that would help you to feel better about yourself

Exercise:

- An optimal plan includes spending 45-60 minutes in your target heart zone 5-6 days per week
- A combination of weight training, aerobic exercise and stretching is best

Symptoms:

- Symptoms like fatigue, digestive disorders and excess weight are signs that you need to make improvements in your diet and lifestyle. Do so before you develop a serious health condition – it is easier to prevent than reverse disease!
